          Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

The cDNAs were digested with SalI and NotI enzymes and cloned into SalI/NotI site of pSPORTI plasmid vector. The DH10B E. coli host was transformed with the ligation mixture by the standard chemical method. The average insert size is about 2.2 kb. The library was constructed by Yulan Piao (NIA)."

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to an isolated polypeptide comprising a death CC domain (DD), death effector domain (DED) or NB-ARC domain. The invention comparison of the invention comparison of the invention of the useful for identifying a binding agent, preferably a protein or a drug that binds a DD, DED or NB-ARC domain, by contacting a DD, DED or NB-ARC commander of the domain from DAP3, IRAK4, CTDD (Chlamydia trachomatis DD protein), DED4 or NB-DARC detecting the association of the domain and the candidate binding agent and compared to the condidate binding agent, by yeast two hybrid assay, immunoprecipitation, SPA, ultraviolet (UV) or CC chemical crosslinking, nuclear magnetic resonance (NMR), mass compared to the stress responses, responses to microbial infection and B cell immunoglobulin class switching, in particular apoptosis within a cell. Antibody specifically reactive with CTDD DD of C. trachomatis, C. pneumoniae, and C. psittaci or a nucleic acid encoding the cinvention is useful for modulating the activity of oncogenic proteins, the convention is useful for detecting a Chlamydia infection. The convention is useful for detecting a Chlamydia infection. The convention is useful for modulating the activity of oncogenic proteins, for treating bacterial infections by modulating the activity of bacterial for conventions. The protein and antibody specific for it are useful for sepsis, autoimmunity, allograft rejection and other diseases. The protein substituted of the coll division, inflammatory diseases such as sepsis, fibrosis, through antisense therapy and gene therapy. The present sequence is human IRAK4 DD cDNA convention is used in antisense therapy and gene therapy. The present sequence is human IRAK4 DD cDNA convention is used in antisense therapy and gene therapy. The present sequence is human IRAK4 DD cDNA convention is useful for the convention of the present sequence is human IRAK4 DD cDNA conventions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Matches

```
CC The present invention provides novel death Domain (DD) and death effector CC domain (DED) proteins and nucleic acids encoding them. The invention also CC provides death domain containing protein such as Chlamydia trachomatis CC death domain containing protein such as Chlamydia trachomatis CC receptor interacting death domain (CTDD) DD and neural growth factor CC receptor interacting death domain (NDD) DD. The invention is useful for CC identifying a binding agent (e.g. protein or drug) that binds a DD, DED CC or NB-ARC domain from DAP3, IRAK4, CTDD, DED4 or NIDD with a candidate CC binding agent and identifying an effective agent (e.g. protein or drug) that binds the DD, DED or NB-ARC domain. The invention is also useful for CC that binds the DD, DED or NB-ARC domain. The invention is also useful for CC that binds the DC DED or NB-ARC domain. The invention is also useful for CC domains and/or anti-DD, anti-DED or anti-NB-ARC domain antibodies are CC domains and/or anti-DD, anti-DED or anti-NB-ARC domain antibodies are CC domains and/or anti-DD, anti-DED or anti-NB-ARC domain antibodies are cuseful for discovery of drugs that suppress infection, autoimmunity, inflammation, allograft rejection, sepsis and other diseases. CC DD, DED or NB-ARC domain proteins are used to treat infection, allergy, allograft rejection, sepsis, keratinocyte inflammatory hyperplasia, keloid, benign prostatic hypertrophy, fibrosis, confidence of the proteins and smooth muscle cell proliferation in arteries cfollowing balloon angioplasty (restenosis). The invention is also used in antibody therapy and gene therapy. The present sequence is human ccc interleukin-l receptor-associated kinase (IRAK)-4 DD CDMA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New polypeptide comprising a death domain or death effector domain, useful for discovery of drugs that suppress infection, inflammation, allergy, sepsis, autoimmunity, allograft rejection and other disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Claim 18; Page 33-34; 99pp;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Stenner-Liewen

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             밁
                AAA09310-20 are novel genes isolated by SEREX screening from a renal cancer cell line 1973/10.4. The genes encode cancer associated antigen precursors. These gene products are useful in methods for preventing, diagnosing and/or treating disorders, especially cancer, associated wis abnormal expression of human cancer associated antigens. The method comprises contacting a sample from a subject with an agent that specifically binds to the mucleic acid molecule or expression product fragment) complexed with a human leukocyte antigen (HLA) molecule and determining the interaction between the agent and the nucleic acid molecule or the expression product as a determination of the disorder
                                                                                                                                                                                                                                                                                                                                                             Preventing, diagnosing and/or treating disorders associated expression of human cancer associated antigens.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     05-OCT-1998;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        contain (DD), death effector domain (DED) or NB-ARC domain. The invention CC is useful for identifying a binding agent, preferably a protein or a drug CC that binds a DD, DED or NB-ARC domain, by contacting a DD, DED or NB-ARC domain from DAP3, IRAK4, CTDD (Chlamydia trachomatis DD protein), DED4 or CC detecting the association of the domain and the candidate binding agent and CC detecting the association of the domain and the candidate binding agent and CC py yeast two hybrid assay, immunoprecipitation, SPA, ultraviolet (UV) or CC chemical crosslinking, nuclear magnetic resonance (NMR), mass CC spectroscopy (MS) and FPA. The invention is useful for modulating the call process such as cell proliferation, cell adhesion, cell communoglobulin class switching, in particular apoptosis within a cell. CC immunoglobulin class switching, in particular apoptosis within a cell. CC immunoglobulin for modulating the activity of oncogenic proteins. The invention is useful for modulating the activity of oncogenic proteins. The crossing the activity of oncogenic proteins, cc for treating a pathology caused by the oncogenic proteins and for creating bacterial infections by modulating the activity of bacterial cc discovery of drugs that suppress infection, inflammation, allergy, cc sepsis, autoimmunity, allograft rejection and other diseases. The protein could contribe the coll division, inflammatory diseases such as sepsis, fibrosis, thorease, inflammatory diseases such as sepsis intended in antisense cc therapy and gene therapy. The present sequence is human IRAK4 gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Query Match

The present invention provides novel death Domain (DD) and death effector CC domain (DED) proteins and nucleic acids encoding them. The invention also CC death domain containing protein such as Chlamydia trachomatis CC death domain containing protein (CTDD) DD and neural growth factor CC receptor-interacting death domain (NIDD) DD. The invention is useful for CC identifying a binding agent (e.g. protein or drug) that binds a DD. DED CC or NB-ARC domain from DAP3. IRAK4. CTDD, DED or NIDD with a candidate binding agent and identifying an effective agent (e.g. protein or drug) that binds the DD, DED or NB-ARC domain. The invention is also useful for CC that binds the DD, DED or NB-ARC domain. The invention is also useful for cell proliferation, cell stress responses, responses to microbial CC infection and B cell immunoglobulin class switching. DDs, DED and NB-ARC domains and/or anti-DD, anti-DED or anti-NB-ARC domain antibodies are useful for discovery of drugs that suppress infection, autoimmunity, inflammation, allograft rejection, sepsis and other diseases. CC DD, DED or NB-ARC domain proteins are used to treat infection, allergy, autoimmunity, inflammation, allograft rejection, sepsis, keratinocyte inflammatory hyperplasia and smooth muscle cell proliferation in arteries following balloon angloplasty (restenosis). The invention is also used in antibody therapy and gene therapy. The present sequence is human cCC interleukin-1 receptor-associated kinase (IRAK)-4 full length gene

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          5
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    5
The invention relates to isolated polynucleotide (I) and polypeptide (II) creation (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypuptide in tissue, as molecular weight markers and as a food gupplement. (II) and its binding partners are useful in medical imaging CC of sites expressing (II). (I) and (II) are useful for treating disorders (II) ving aberrant protein expression or biological activity. The CC polypeptide and polynucleotide sequences have applications in CC diagnostics, forensics, gene mapping, identification of mutations cresponsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and CC amino acid sequences. Als64197-AAS94564 represent novel human diagnostic patent did not appear in the printed specification, but was obtained CC electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                             New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutation responsible for genetic disorders or other traits and to assess
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            31-MAR-2000; 2000US-00540217.
